Opening a New Stage of Growth for the JRC Group through Wireless Communications, Sensing, and AI

Last year, our Group implemented decisive structural reforms. By consolidating our business functions into JRC and Ueda JRC, and integrating our manufacturing functions into Nagano JRC, we have been reborn as a new JRC Group that operates as “One JRC.”

Going forward, we will continue to drive structural reform and business growth in tandem. Our goal is to become a “Total Engineering Company for Wireless Communications” that delivers DX solutions to society by fully leveraging wireless communications, sensing, and AI. In doing so, we will further contribute to a safer and more secure society across our core markets --public sector, specialized equipment, marine business, and private sector.

I would like to express my sincere appreciation to all our stakeholders, including our customers, business partners, and the local communities, for your generous and continued support. We respectfully ask for your continued guidance and support, and look forward to your ongoing high expectations for the newly reborn “One JRC” Group.

Japan Radio Co., Ltd.
Representative Director President & CEO
Kaichiro Sakuma

Management Philosophy

Each and every employee strives to realize JRC group management philosophy through his/her actions.

Management Philosophy

We, JRC Group shall deliver excellent value and contribute to a bright future for people, society and the world through wisdom and creativity.

JRC has established four levels of a code of conduct for our officers, employees, and people we work with.

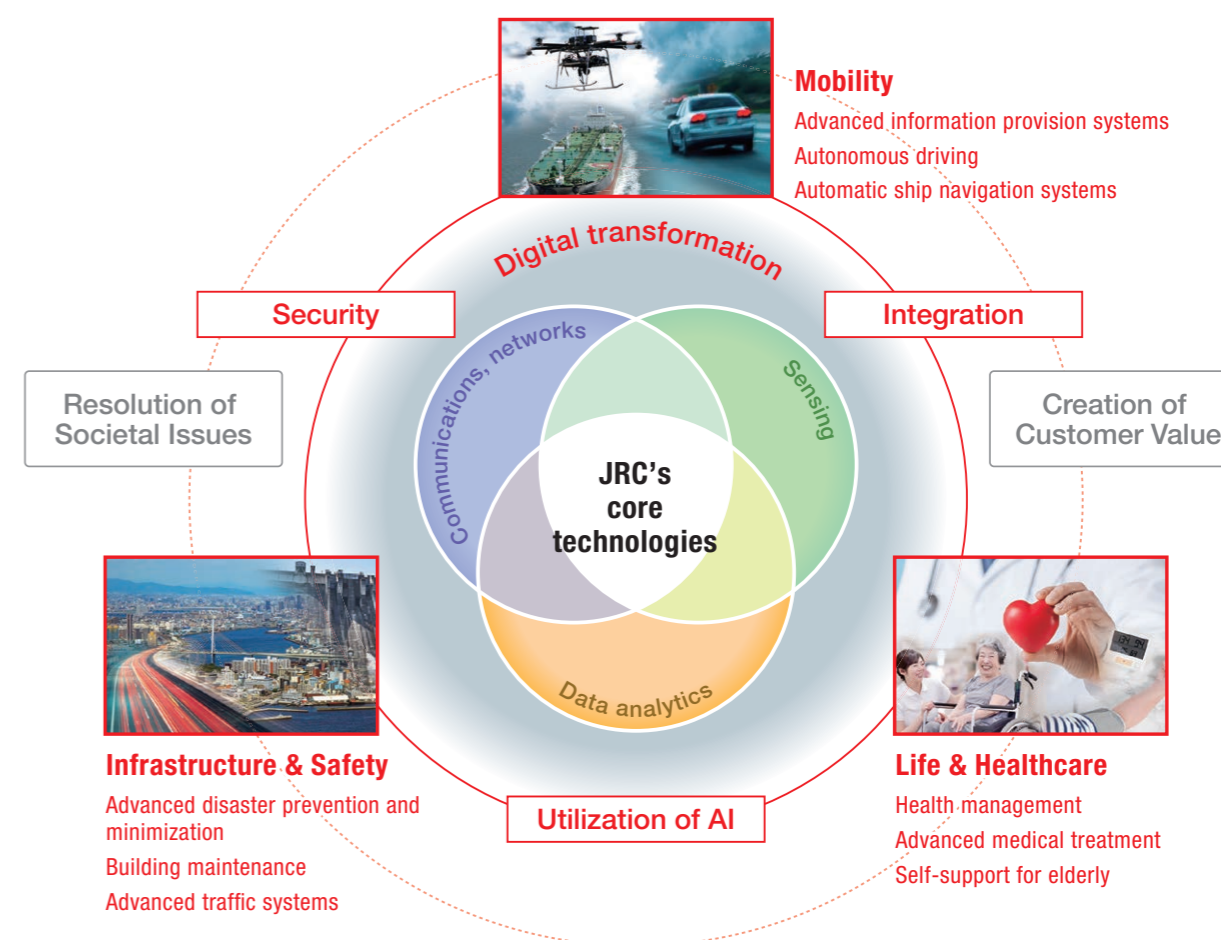

Basic Policy of Management

- We will use creative and inventive ideas to develop our original and unique technology.
- We will respect each other to build mutual harmony and benefit.
- We will engage in fair and equitable business activities and fulfill our social responsibilities.
- We will get aware of the needs of society and take on a challenge seizing every opportunity, then realize them.

Business Conduct Guidelines

1. Respect for Human Rights
2. Thorough-Going Compliance
3. Respect for Diversity
4. Awareness and Concern towards our Environmental Impact
5. Safety is the Basis for Everything
6. Fair and Transparent Business Practices
7. Boldly Striving Forward
8. Innovation
9. Quality Communication

Strategic Business Domains

The Nippon Foundation MEGURI2040 Fully Autonomous Ship Program

Marine Systems Division

We provide high-performance, high-quality products for the global shipbuilding sector by leveraging our expertise in ship equipment accumulated over many years and advanced technical capabilities related to radio communications. Going forward, we aim to provide safety and peace of mind for autonomous ship navigation.

Marine systems and products

Marine radar antennas

Smart bridge deployment examples

- Integrated bridge systems
- Cloud/information services (Ships DX)
- Navigational instruments
- Marine communications equipment
- Fishing equipment

Solution Business Division

JRC supports the comprehensive implementation of disaster-resilient infrastructure essential to the society. We offer a best solution for various projects based on our highly reliable products.

Land systems and products

Drone-based river monitoring system for disaster prevention

Airport meteorological doppler radar

- Disaster prevention information systems
- River management systems
- Aeronautical surveillance systems
- Weather radar systems
- Traffic information systems
- Radio broadcasting systems

Cited from Japan Self-Defense Forces Equipment Yearbook

Defense Systems Division

We provide wireless application equipment and systems to Japan's Ministry of Defense. We also aim to expand into the aviation and space industries, which we see as potential growth areas.

Unmanned mobile image transmission systems (unmanned aerial vehicles)

Unmanned mobile image transmission systems (ground stations)

- Radar equipment and systems
- Communication equipment and systems
- Wireless applied equipment and systems

Connected Systems Division

Centered on wireless communications, we aim to solve social challenges and create new value through standardized products and systems. With a primary focus on industrial applications, we provide optimal wireless solutions and contribute to the realization of a sustainable society.

Land systems and products

- In-vehicle equipment
- Telematics devices
- Professional mobile radio terminals
- Infrastructure equipment
- Information and communications equipment
- Automated production equipment
- Automotive electronic components

Automatic Toll Payment Onboard Unit (ETC) for Motorcycles

IoT terminals for meter reading / smart meters

Telematics Control Unit (TCU) for Industrial Equipment

Automotive components

Healthcare Equipment Business

Ueda Japan Radio Co., Ltd.

We offer advanced medical electronics equipment that meets the high demands of the medical industry, with our core strengths being ultrasonic and wireless technologies.

Ueda Japan Radio

- Ultrasonic medical transducers and probes
- Image processing equipment
- Ultrasonic application equipment
- Analyzers
- Wireless healthcare devices
- Wireless applied equipment

Portable ultrasound systems

Allergy screening test kits

Deploying wireless communication technologies amassed over more than 110 years to meet the needs of the times.

Since its foundation, JRC has continued creating products at the leading edge. Based on technologies and know-how amassed over more than 110 years, we have deepened our core technological expertise in such areas as antennas, signal processors, amplifiers, and networks. In the communications field, which has advanced significantly in recent years, we help build a prosperous

society by providing solution-based services that meet the sophisticated needs of society. JRC's R&D mission is to foster the creation of a better society by connecting people, things, and communities. We tackle R&D challenges so that we can contribute to safety and peace of mind in the world.

World-leading technologies born through JRC's research and development

Wireless technology advancement: High-capacity communication systems

As part of our efforts to develop high-capacity technology for upgrading infrastructure systems, we have achieved 4096 QAM multi-level modulation in our ultra-high multi-level modulation and demodulation technology. In millimeter-wave broadband transmission technology, we have achieved high-capacity transmission exceeding 5 Gbps in a 60 GHz-band proximity radio system.

Going forward, we will work to advance communications by utilizing AI and other cutting-edge technologies, contributing to the realization of next-generation infrastructure systems.

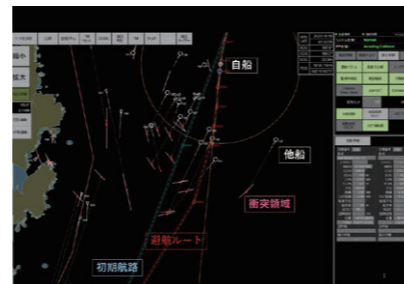

3D Image of Rain Intensity

Antenna Image of Phased Array Radar

Radar system advancement: Phased Array Radar

As the number of extreme weather disasters increases, weather information with high temporal and spatial resolution is required. Our phased array radar achieves high dense observation for the whole sky in 30 seconds. Hereafter, more accurate observation will be required for accurate weather forecasting and resolving mechanism of hazardous clouds. We will solve the requirements by developing dual polarization phased array radar with simultaneously transmitting and receiving horizontal and vertical polarization waves.

Collision avoidance route generation screen

Accurately Ascertaining Information on Surrounding Vessels and Applying it to the Collision Avoidance Routes of Autonomous Ships

In order to generate collision avoidance routes for autonomous ships, it is essential to accurately grasp information on surrounding vessels, including their positions, speeds, and courses.

By leveraging the sensing technologies we have developed over many years, we have established high-precision technologies for obtaining information on surrounding vessels through the fusion of radar, AIS, and other sensor data. Going forward, we will contribute to enhancing the safety and security of autonomous ships.

Using exhaustive reliability testing and quality control systems to deliver higher levels of safety and peace of mind.

JRC uses rigorous quality control and stringent reliability and evaluation testing across all phases of its products and systems—development, design, manufacture, and installation—in order to foster safety and peace of mind for

customers. We also implement the plan-do-check-act (PDCA) cycle in an effort to offer products that satisfy customers.

Meticulous quality control systems deliver higher levels of safety and peace of mind

Scanning electron microscope

Test samples are irradiated with an electron beam to obtain images with several hundred thousand-fold resolution for detailed surface analysis.

X-ray fluorescence spectrometer

This spectrometer can identify the elements from the fluorescence spectrum generated by irradiating a sample with X-rays.

Rapid-rate thermal cycle chambers

This chamber evaluates the reliability of products by subjecting it to repeated stress to determine differences in thermal elasticity when exposed to rapid changes of high and low temperatures.

Temperature and humidity walk-in chamber

Independently controls the temperature and humidity of the chamber and evaluates the environmental durability of devices. This chamber's test area dimension is W5.0m x H2.8m x D5.0m.

3m method anechoic chamber

This chamber evaluates the reliability of products by measuring electromagnetic compatibility (EMC).

Information security

JRC is developing information security activities as a member of the Nisshinbo Group.

We have obtained ISO/IEC 27001 (ISMS) certification*1 for our information security measures, and we work according to this standard. To strengthen our response to external threats, we maintain and improve information security and ensure business continuity by implementing PDCA cycles led by top management.

Principal activities

- Provide education on information security through ISMS internal audits and an e-learning system
- Organized CSIRT*2 and joined the Nippon CSIRT Association in 2018
- Support for the detection of, response to, and recovery from information security incident, and prevention of recurrence
- Prevent information leaks due to cyber-attacks and internal fraud
- Minimize damage such as through business interruption

*1: Scope of registered activities:

- Construction, operation, and management of company-wide information systems
- Design and development of systems based on customer requirements that utilize communications equipment, information processing technologies, and radio-wave (RF) application equipment

Applicable sites: Head Office (Nakano, Tokyo), Nagano and Kawagoe Plants

*2: CSIRT:

Computer Security Incident Response Team

Quality Assurance Initiatives

JRC received an ISO 9001 quality management system (QMS) certification in 1994 and made the switch to the new 2015 standards in 2017. In 2018, JRC also received certifications in JIS Q 9100, which are QMSs for specific industrial sectors. Using these QMSs as a base, we are building systems and mechanisms for quality assurance. JRC is securing optimal quality in all business areas from products for private markets, to its marine systems which can endure installation in unique environments. We are also responding to diverse customer needs for a wide variety of products through our weather radars, which are made to customer specifications, and our dam control systems.

Health Management Initiatives

Health Management Declaration

JRC puts the health of its employees first, promotes the development of a rewarding organization for each and every employee, and aims to be a company that is attractive to both itself and others through health.

Health Management Initiatives

We are actively engaged in health management, as we view the health of our employees important not just in the sense of promoting their physical and mental health, but also because it links to the health of the organization, and we are continuously implementing a variety of measures to this end. As a result, the Company has been certified as Health and Productivity Management Corporation (Large Enterprise Category) for seven consecutive years.

Individual Health

By analyzing the data from specific health checkups, we promote exercise and sleep education.

Promoting health through walking

We encourage employees to embrace walking as an ongoing habit, as increasing the amount of physical activity through walking helps reduce the risk of lifestyle-related diseases.

JRC's own workplace gymnastics

To prevent health problems and mental disorders caused by VDT work among employees, we conduct our own workplace exercises twice a day throughout the Company.

Sleep hygiene training

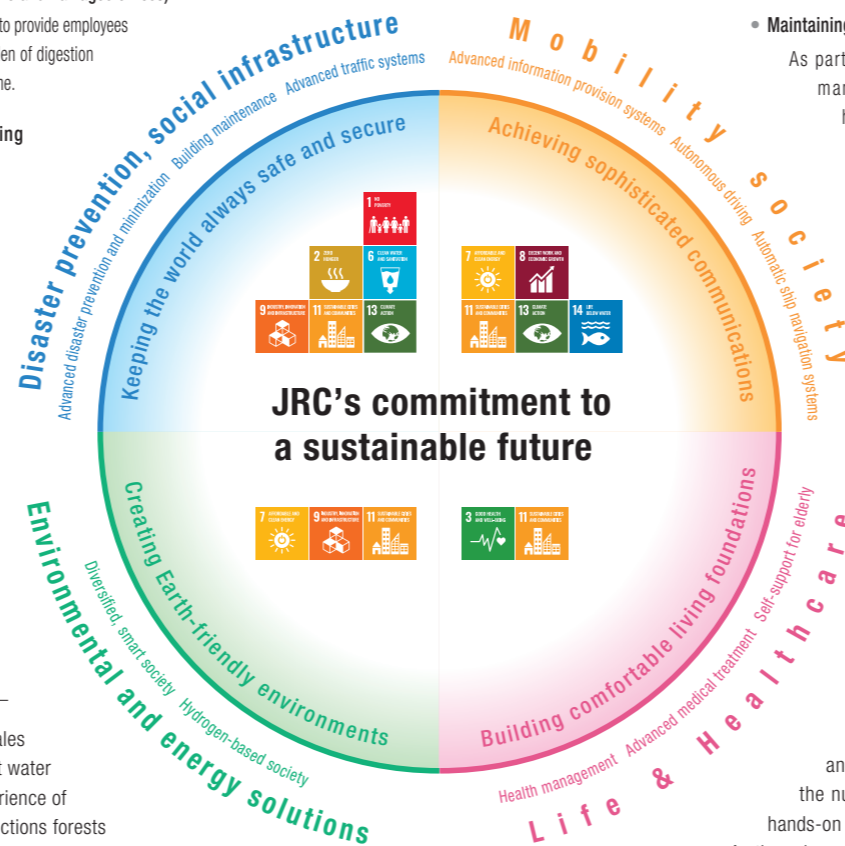

We provide e-learning to help all employees gain basic knowledge about sleep. At the same time, employees who have sleep issues based on the results of preliminary questionnaires are given individual sleep training (optional) and followed up for three months for improvement.

Providing dinner at the company cafeteria (Nagano and Kawagoe offices)

In addition to lunch, the employee cafeteria serves dinner to provide employees with nutritionally balanced meals and to reduce the burden of digestion on the gastrointestinal tract by ensuring an early dinner time.

Supporting outpatient treatment for smoking cessation

The health insurance association pays the full cost of outpatient treatment for smoking cessation, since smoking is associated with many diseases, including cancer, and also causes lung cancer and other health problems not only to the smoker but also to those around him or her.

Organizational Health

The following initiatives are being implemented to improve productivity, increase employee motivation, and prevent employee turnover.

Stress checks

Based on the results of stress checks, we analyze individual stress levels and risks by department. Through collaboration among in-house specialists such as industrial physicians and public health nurses, as well as workplace personnel, we work to reduce individual stress levels and improve workplace environments.

Women's health education

To help women remain healthy and maintain high job performance, it is essential that they and those around them have correct knowledge of women-specific health-related issues and take appropriate actions. We offer e-learning to foster understanding and action in this regard.

Regular health checkups and disease prevention

All employees undergo regular health checkups to aid in the early detection and treatment of illnesses, as well as helping prevent or slow the progression of illnesses based on the results of the checkups.

Mental health measures

We believe that management supervisors are the key people to creating comfortable workplaces (fostering a sense of security and a highly productive workplace). Accordingly, we provide "care by the line" e-learning for department heads and group heads. The objective is to acquire the knowledge necessary to care for subordinates, and to learn how to respond to consultations from subordinates and as a workplace organization.

Fulfilling our obligation to ensure safety

While taking into consideration the needs of the times, we engage in detailed work-related considerations to protect the safety and health of our employees and help them to play an active and vibrant role in the Company.

Maintaining administrative standards on highly burdensome work

As part of the Nisshinbo Group, we have created unified management standards for overseas assignments, hazardous work, late-night work, and other highly burdensome work.

Measures to prevent passive smoking

To reduce the harmful effects of tobacco, which is implicit in many diseases, we work to prevent passive smoking by providing segregated smoking areas and restricting smoking hours.

Health management support for expatriates and business travelers

For employees posted overseas, medical checkups and interviews with industrial physicians are conducted before and after returning from overseas assignments. Short-term overseas business travelers are required to submit a medical questionnaire before and after their trips, and industrial physicians or nursing staff provide information as necessary. From a safety standpoint, we offer employees who need follow-up checks support through interviews and phone calls.

Environmental Initiatives

We recognize environmental conservation as the most important common concerns for all mankind, and reflect this in all aspects of our business.

Promoting biodiversity conservation activities

As part of its biodiversity conservation activities, since 2022 JRC has made donations to the Tokyo University of Marine Science and Technology, endorsing its research theme of "Collection and Monitoring of Drifting Marine Plastic Litter by Set Net Fishing."

The Chugoku Branch Office and the Yamaguchi Sales Office participate in "hands-on activities to protect water through afforestation." Or goals are to foster experience of afforestation and deepen understanding of the functions forests play in water source irrigation and the prevention of global warming.

Experiential activity on water protection through afforestation

Utilization of CO₂-free electricity produced in Shinshu

Nagano JRC is partly powered by CO₂-free electricity produced by a hydroelectric power plant in Nagano Prefecture. In April 2023, we began purchasing "Shinshu Green Electricity" from Chubu Electric Power Miraiz Co., Inc. We aim to increase the amount of locally produced and consumed CO₂-free electricity to help reduce greenhouse gas emissions.

Regional and social activities

JRC contributes to sustainability and longevity of society, which is confronted with various challenges, including a low birthrate and aging population.

Disaster Prevention and Radio Craft Workshop

The Disaster Prevention and Radio Craft Workshop is a place where children are carefully taught the importance of disaster prevention and the fun of making things. The workshop provides practical learning, including the creation of My Timeline*, with the aim of eliminating the number of delayed evacuations. This program provides a valuable opportunity to learn about life-saving disaster prevention through hands-on experience with how to gather information using radar and the Internet, and how radios and wireless systems work.

As they play, children acquire knowledge and skills that help them prepare for disasters such as earthquakes and floods, taking steps toward building a safer society.

Learning how to solder, with the support of a staff member

Listening to the sound of a disaster prevention radio

Creating My Timeline while looking at a hazard map

About My Timeline

My Timeline started as part of the government's "zero delayed evacuations" initiative by the "Everyone Timeline Project" of the Shimodate River Office of the Ministry of Land, Infrastructure, Transport and Tourism. Under this initiative, each resident creates a timeline to compile and organize their own standard disaster prevention actions to be taken when river levels rise due to an approaching typhoon. The timeline is to be used as a checklist of actions to be taken and as a tool to support decision making in the event of floods with severe time constraints, thereby contributing to the goal of zero delayed evacuations.

Expanding our service network in Japan and overseas.

Founded	: December 1915
Paid-in Capital	: 14,704 millions of Yen
Number of Employees (Consolidated)	: 5,056
Net Sales (Consolidated)	: 159,871 millions of Yen
Classification of Business	: Manufacture and Sale of Radio Communication Equipment
Parent Company	: Nisshinbo Holdings Inc.

Board of Directors As of 25 March, 2026

Representative Director President and Chief Executive Officer Kaichiro Sakuma	Executive Officer Naoya Hiraki
Director and Executive Officer Takuya Noda	Executive Officer Yuji Kinoshita
Director Yasuji Ishii	Executive Officer Akira Yamada
Director Hiroyuki Wakabayashi	Executive Officer Hideharu Matsubara
Director Koji Saito	Executive Officer Akira Nakagawa
Standing Corporate Auditor Osamu Nagashima	Executive Officer Kazuho Tsukamoto
Auditor Kenichi Morita	Executive Officer Masataka Kashiwa
Executive Officer Haruhiko Oba	Executive Officer Tatsuya Hitosugi
Executive Officer Masahiro Ichikawa	Executive Officer Reiji Miwa
Executive Officer Shintaro Inoue	Executive Officer Junya Dosaka

Organization Chart As of 1 April, 2026

Our first step in 1915 connects to the world now.

History		Project		History		Project	
Dec. Anonymous Association, Nippon Radiotelegraph Manufacturing Co. is founded.	1915	Dec. "Nippon Radio quenched spark radiotelegraph unit," our first product, is developed.		Jan. Our capital surpasses 10 billion yen.	1990	Mar. The world's first "Automotive GPS receiver for car navigation" debuts.	
Mar. Nippon Radio Telegraph Manufacturing & Co., Ltd. is founded.	1916				1991	Sep. "A new series of radio communication equipment for the GMDSS" is developed.	
	1917				1993	Feb. We delivered our first mobile telephone for domestic market.	
Feb. The company is reorganized as Nippon Radio Telegraph and Telephone Co., Ltd.	1918	Sep. Our first "vacuum tube" is developed.		Apr. Japan Radio Company (HK) Limited is founded.	1994		
	1919			Jul. We introduce its system of independent divisions.			
Apr. A contract on capital and technology is concluded with TELEFUNKEN GmbH in Germany.	1920	Feb. Japan's first "radio for weather broadcasting" is developed.		Jun. LPA (Linear Power Amplifier) factory opens.	2000		
Jan. Our headquarters and factory relocate to newly constructed facilities in Osaki, Tokyo.	1922	Dec. Japan's first "500W vacuum tube type transmitter" is developed.		Oct. MARINFONET CO., LTD. (current JRC MARINFONET CO., LTD.) is founded.			
	1923	Jun. Development of radio parts and radio receiver commences.		Dec. The head office relocates to Nishishinjuku, Shinjuku-ku, Tokyo.	2002		
Jul. Our factory relocates to newly constructed facility in Mitaka, Tokyo.	1924	Dec. Our "new style of radio receiver" wins first prize in the National High-grade Radio Receiver Prize Competition Exhibition.			2006	Oct. "JRM-11 Series ETC automotive equipment for motorcycles" is released.	
	1925	Mar. Fully nationalized "500W power broadcasting transmitter" is developed.		Aug. The head office relocates to Ogikubo, Suginami-ku, Tokyo.	2008	May The world's first "MED approval for marine radars conforming to the new IMO radar performance standard" is acquired.	
Dec. Our company name changes to "Japan Radio Co., Ltd."	1926			Dec. We become a consolidated subsidiary of Nisshinbo Holdings Inc.	2009		
Dec. Our new logo is  born.	1927	The world's first "cavity magnetron" is developed.		Nov. A locally incorporated company is established in Shanghai.	2010	Jun. The world's first "9GHz band 300W marine solid-state radar" with a narrower radar band is developed.	
	1928			Sep. We issued a plan for "Structural business reforms toward renewed growth."	2011	Dec. The world's first "S-band/solid state weather radar" is supplied to PAGASA in the Philippines.	
Oct. The firm restarts as Japan Radio Co., Ltd. (secondary corporation).	1929	Nov. Japan's first "ultrasonic sounding equipment" is developed.		Dec. Alphatron Marine Beheer B.V. becomes a consolidated subsidiary.	2012		
Nagano Japan Radio Co., Ltd. is founded.	1930	May We commercialize a fish finder after demonstrating strong performance in fish finding experiments.		Jul. The head office relocates to Nakano, Nakano-ku, Tokyo.	2013		
Ueda Japan Radio Co., Ltd. is founded.	1931			Aug. Nagano plant opens.	2014		
	1932	Dec. Japan's first "9GHz marine radar" is developed.		Dec. The Advanced Technology Center opens.			
Feb. Our stock is listed on the Tokyo Stock Exchange.	1933			Mar. Construction of the production building is completed.	2015	Jul. We release "the world's smallest and lightest S-band solid state radar."	
Oct. Osaka Wireless Office Co., Ltd. (current JRC System Service Co., Ltd.) is founded.	1934	Mar. Japan's first "weather radar" is developed.		Oct. We celebrate the 100th anniversary of its founding.	2016		
May Japan Radio Glass Co., Ltd. is founded.	1935			Mar. Nagano Japan Radio Co., Ltd. and Ueda Japan Radio Co., Ltd. becomes wholly owned subsidiary.			
Apr. A technical assistance contract is concluded with TELEFUNKEN in Germany.	1936			May The Marine Service Center opens.			
Nov. Sasebo Japan Radio Co., Ltd. is founded.	1937						
	1938	Feb. The world's first "transistorized LORAN receiver" is released.		Aug. Kawagoe plant opens.			
	1939	Sep. "A rainfall/water-level telemeter system" is delivered to the Futase Dam.		Oct. Alphatron Marine Beheer B.V. becomes wholly owned subsidiary.	2017	May New navigation support tool "J-Marine NeCST" is jointly developed.	
Jul. A new head office opens in Toranomon, Minato-ku, Tokyo.	1940			Jan. PT. JRC SPECTRA INDONESIA is founded.		Sep. We delivered a large driving simulator to an automobile manufacturer.	
Oct. Japan Radio Cooperation Association is founded.	1941			Apr. San Jose Technical Development Center opens.			
Dec. As a joint venture with RAYTHEON company in the US, New Japan Radio Co., Ltd. is founded.	1942			Jul. Alphatron Marine Korea Co., Ltd. is founded.			
	1943			Oct. JRC becomes wholly owned subsidiary of Nisshinbo Holdings Inc.	2018		
	1944	Aug. Japan's first "simultaneous interpretation system" is delivered.		Jul. ProNav As becomes wholly owned subsidiary.	2019	Jan. For the first time in the world, phased weather radar was used for the high-speed 3D observation of tornadoes associated with typhoons.	
	1945	"The sound systems for the Tokyo Olympics" are delivered.				Sep. Began transmitting disaster-related information to digital signage used at underground commercial facilities using Alertmarker+, the first system of its kind in Japan.	
Aug. A new Defense Systems factory opens.	1946			Mar. Certified as a Health and Productivity Management Corporation 2020 (Large Enterprise Category) Note: We have maintained that certification since	2020	Mar. Developed JM-Watcher II, the first app in Japan that helps prevent collisions by providing notice of approaching marine vessels.	
Oct. A laboratory opens.	1947	Oct. A "compact, transistor-type marine radar" is developed.		Jan. The telecommunications equipment business is transferred to JRC Mobility Inc.		Jun. We participated in the Nippon Foundation's fully autonomous ship program.	
	1948	May Our "JAC-120 general-purpose computer system" is released.			2021	Apr. We conducted Japan's first successful video transmission experiment using geostationary satellite connection to local 5G.	
May JRC do Brasil Empreendimentos Electronicos Ltda. is founded.	1949	May Japan's first "real-time signal analyzer" is released.				Sep. Japan's first Alertmarker+ multilingual translation service begins operation at Kagoshima Airport.	
	1950	Aug. Japan's first "Ship Earth Station device for the international maritime satellite system" is developed.				Nov. We succeeded in the world's first autonomous collision avoidance of a small unmanned aircraft at a relative speed of 200 km/h.	
	1951	Jun. "An amateur radio receiver" is released.			2022	Jun. We delivered a "multilateration system" to the Vietnam Air Traffic Management Corporation.	
Apr. Japan Radio clinic opens.	1952	Mar. "Fully solid-state PCM/PSK multiplex radio communication equipment" is developed.				Jun. We released the "Safety Zone Viewer," a collision danger zone display function.	
May The Saitama plant opens.	1953				2023	Apr. We developed the "offshore facility access gateway," Japan's first six-axis motion compensator with an overhead bridge.	
Apr. JRC Engineering Co., Ltd. is founded.	1954						
A new automated production factory opens.	1955	Aug. We achieve the top world share in "Ship Earth Station devices for the international maritime satellite system."					
May The head office relocates to Akasaka, Minato-ku, Tokyo.	1956				2026		
	1957	Aug. Japan's first "GPS receiver for ships" is developed.		Jan. JRC Mobility Inc. will be merged into the Company, and the wireless communications business of Nagano Japan Radio Co., Ltd. will be consolidated into our operations.			
Oct. JRC Tokki Co., Ltd. is founded.	1958						
Oct. A new factory of manufacturing of printed wiring board opens.	1959						

quenched spark radiotelegraph unit (1916)

World's first cavity magnetron (1939)

Japan's first meteorological radar (1954)

Amateur radio receiver NRD-505 (1977)

Inmarsat-A JUE-35A (1983)

ETC automotive equipment for motorcycles JRM-11 (2006)
